Ex. 5 - Deliberative Process

From: Bassler, Rachel

Sent: Thursday, January 05, 2017 5:28 PM

To: Kelley, Jeff <kelly.jeff@epa.gov>; Lee, Monica <Lee.Monica@epa.gov>

Subject: RE: Care to Comment Why EPA Official Said No Lead In East Chicago, Indiana Water?

Here are some draft responses

Ex. 5 - Deliberative Process

Ex. 5 - Deliberative Process

1) If digging up soil can potentially activate lead in the water pipes, doesn't that indicate a bigger issue with the infrastructure?

Ex. 5 - Deliberative Process

2) What are the requirements for testing for lead, bacteria, chloroform and other toxins post-water treatment plant? Doesn't matter if water is good post-treatment plant if it gets contaminated in the pipes.

3) Why isn't the EPA testing home water heaters? If it's possible for lead to activated into the water stream by digging up soil, it would seem to make sense to test the water heaters and shower. My understanding is that hasn't been done in E. Chicago or Flint.

4) There's been tests done by Wayne State in Flint showing concern over bacteria in the water, both pathogenic and non-pathogenic). Has the EPA been testing for bacteria in Flint and E. Chicago, and if not, how can it tell people it's safe to drink water or shower?

5) Where do I find the detailed test reports for the EPA's testing done in E. Chicago to date. So far, there's been about 40 homes tested, correct?

Ex. 5 - Deliberative Process

6) Is the EPA concerned about orthophosphates being used in the water distribution system? Experts tell me this is food for bacteria.

Ex. 5 - Deliberative Process

7) How is it that Gov. Snyder/EPA is telling people it's safe to shower in Flint, but to my knowledge, you haven't been testing the shower water or water heaters?

Ex. 5 - Deliberative Process

8) What has been Gov. Pence and the EPA's communication since this issue came to light in July, 2016. When was he first made aware of the problem and has he granted extra resources and relief funds from the EPA?

Sorry about that--just deleted some. Respectfully, I'd like to speak with the head of District 5, which is him, and get an on the record response. If he's not available, I can always say the EPA could not provide an on the record response.

Below are several questions. Unless I'm missing something, it seems reckless to be telling folks in Flint and E. Chicago it's Ok to shower and bathe without testing shower water or home water heaters—the home I tested in E. Chicago, which the EPA found lead in the sink water, did not have shower or water heater checked.

- 1) If digging up soil can potentially activate lead in the water pipes, doesn't that indicate a bigger issue with the infrastructure?
- 2) What are the requirements for testing for lead, bacteria, chloroform and other toxins post-water treatment plant? Doesn't matter if water is good post-treatment plant if it gets contaminated in the pipes.
- 3) Why isn't the EPA testing home water heaters? If it's possible for lead to be activated into the water stream by digging up soil, it would seem to make sense to test the water heaters and shower. My understanding is

that hasn't been done in E. Chicago or Flint.

4) There's been tests done by Wayne State in Flint showing concern over bacteria in the water, both pathogenic and non-pathogenic). Has the EPA been testing for bacteria in Flint and E. Chicago, and if not, how can it tell people it's safe to drink water or shower?

5) Where do I find the detailed test reports for the EPA's testing done in E. Chicago to date. So far, there's been about 40 homes tested, correct?

6) Is the EPA concerned about orthophosphates being used in the water distribution system? Experts tell me this is food for bacteria.

7) How is it that Gov. Snyder/EPA is telling people it's safe to shower in Flint, but to my knowledge, you haven't been testing the shower water or water heaters?

8) What has been Gov. Pence and the EPA's communication since this issue came to light in July, 2016. When was he first made aware of the problem and has he granted extra resources and relief funds from the EPA?

"It's not similar to Flint, this is not a water pathway issue. They get Lake Michigan water, so there's no groundwater usage, so the water they are getting is not like from a well. They're looking at soil lead and kids playing in the dirt, getting it in their hands, putting their hands in their mouths, ingesting it, and possible inhalation from any dust from that topsoil."

As recent news reports have shown, this isn't true. I also spoke with a family last night in East Chicago who the EPA tested their home, only checking sink water and ground soil. Well, I drew water from the home water heater, which resulted in discolored water. Why is it that the EPA is not testing home water heaters in both East Chicago AND Flint, where in the latter, private tests have already uncovered bacteria.
